

Checklist for patients prior to adenoidectomy

- Patients must be in good overall health before the surgery (no acute cold or fever).
- Patients must not eat or drink on the day of the surgery.
- Patients (or their representatives) must know about any of chronic diseases they have, previous surgeries, medication they are on (preferably have it with them).
- Patients (or their representatives) must have the following exams carried out not earlier than 10 days prior to surgery:
 - automated blood test, coagulogram (APTT, SPA, INR);
 - blood glucose test and blood type test;
 - electrocardiogram (ECG).Test results must be within the reference range.

All of these exams can be done in 2 to 3 hours in our centre on the day of the surgery or beforehand for an additional fee.
